

Documenting Seasonal Influenza Administration in Accuro

Panorama is Public Health's digital health solution for communicable disease case management and surveillance and receives regularly scheduled immunization data recorded in Accuro. Public Health uses the influenza immunization data submitted from Accuro for influenza inventory management and coverage surveillance. Data accuracy is critical to the success of the electronic process and Accuro users **MUST** enable the extract module and map the existing vaccines in the application to the Public Health approved Influenza Immunization Agent using the [Vaccine List](#).

Enable NS Immunization Extract Module

1. Click Accuro **Start Menu** 
2. Type **Manage Security** in the search box
3. Select **System Settings > Modules > Check NS Immunization Extract > Save Settings > Close**

TIP: Only System Administrator with access to Manage Security can enable this functionality

General Modules

General

- Accuro Chat
- Accuro Mobile
- Background Document Upload
- Local Update Cache Database
- NS Immunization Extract**
- Surgical Wait List
- Traffic Manager
