## Accuro Immunization Submissions to Public Health

Panorama is a public health case management and surveillance system that is enabled to automate the immunization record submissions from the EMR to Public Health. Data accuracy is critical to the success of this electronic process and Accuro users must map their vaccines to the Department of Health & Wellness approved vaccines to facilitate automatic submissions. Check out the following list of “Do’s” and “Don’ts” for best practice and access the Accuro User Guide for the [NS Immunization Extract Guide](#).

Use the same name that is displayed on the patient health card

Validate Health# and Birthdate for accuracy

Use the Department of Health & Wellness approved vaccine [immunizing agent list](#)

Only use the agents with ‘unspecified’ for vaccines without known lot# & expiry information

Don't use special characters or symbols in the patient name (accents, quotations around preferred name etc.)

Don't leave the Health# and Birthdate blank in the patient demographics

Don't leave the Immunizing Agent field blank or record will not be submitted to Public Health

Don't enter 'XXX' or values other than the lot# in the field
