

In Panorama, **Indicative Disease** can be selected as the primary method of diagnosis. An indicative disease diagnosis must be confirmed by a physician – this information is not included on a lab report.

For Nova Scotia, the Indicative Disease fields will **only be used** for cases of HIV/AIDS.

1. To select an Indicative Disease, navigate to the **Investigation Information** screen and scroll down to the **Diagnosis** section.

The screenshot displays the 'Investigation Information' screen. The 'Diagnosis' section is highlighted with a red border. It includes the following fields:

- Diagnosis Date:** A date picker with fields for year (2018), month (12), and day (11).
- Primary Method of Diagnosis:** A dropdown menu.
- Method of Detection:** A dropdown menu.
- Comments:** A text area with a character limit of 4000 and an 'Add' button.

Below the 'Diagnosis' section, there is a table with columns for 'Date', 'Comments', and 'Recorded By'. At the bottom of the screen, there are buttons for 'Close Investigation', 'Re-Open Investigation', 'Save', and 'Reset'.

2. Select Date.
3. Select **Primary Method of Diagnosis** = Indicative Disease.
The **Indicative Disease** section will be displayed.

Diagnosis

Diagnosis Date: / /
yyyy mm dd

Primary Method of Diagnosis:

Indicative Disease

* At least one required if Method of Diagnosis is Indicative Disease.

* Indicative Disease:

* Year of Diagnosis:

Diagnosis Type:

Row Actions:

Indicative Disease	Year of Diagnosis	Diagnosis Type

4. Select **Indicative Disease**, enter **Year of Diagnosis** and select **Diagnosis Type**.
5. Click **Add Indicative Disease** button.

Diagnosis

Diagnosis Date: / /
yyyy mm dd

Primary Method of Diagnosis:
