

General Defaults – QRC 0.2

Points to Remember

- User defaults in Panorama are designed to minimize data entry and reduce the time required to enter the same information repeatedly on different Panorama screens. A user can define how Panorama will fill out specific fields on most immunization screens in advance.
- Select the Organization that provides the vaccine supply. When selecting your Organization, remember that the Organization you select is the one that supplies your vaccine product.
- In most cases, it is recommended that nurses leave the Provider section. Panorama will automatically default to the Provider who has signed in when they are documenting provider recorded immunizations.
- Nurses or Clerks who are recording many immunizations on behalf of another provider may want to set the Provider default setting to reflect another provider's name when documenting non-provider recorded immunizations. Remember to clear/update the default setting when you are finished entering information for a different provider.

Panorama Quick Reference Cards

- The Holding Point Location default should be verified if a nurse delivers immunizations at both school and Public Health Office clinics. There are separate HPLs for each.
