

## Record Consent – QRC 1.7A

### Points to Consider

- There are multiple ways to enter consents. Consents may be created from a Mass Imms Event worksheet and through the Immunization Profile.
- Users may select the individual antigens for the agent or they may select the agent.
- It is important to add a “to” and “end” date. The dates must not be the same.
- The Forecaster does not consider consents when forecasting.
- If consent is granted in error, users do not have the option to go back to missing. The only way to revert back is to update the consent to “refused” and select the to and from dates as today’s date.
