

Panorama Tips & Tricks Interim Work Arounds

A limited number of issues have arisen during the deployment of Panorama that will require short term work arounds until the next release is made available. The following are the documented issues and their respective workarounds.

Issue	Workaround
RTC 108768 (Panorama Service Request 109153) – Immunization Reason for Deletion, requires more than one value in the vocab domain.	Client has supplied acceptable second value to add to the domain vocabulary.
RTC 108871 (Panorama RTC 107696) – Vaccine Wastage Error – multiple lot numbers.	Client to manage Vaccine Wastage using existing manual process until further notice.
RTC 108776 (Panorama RTC unknown R3.1) – Route of administration does not auto-populate based on lot number.	Client to manually enter route of administration.
RTC 108142 (Panorama RTC 106146) – Wrong Provider displaying in the Provided By column of the Search results screen.	Open the details to see the correct Provider.
