

Pre-set Risk Factors, Update, View, End Date – QRC CLT 101-5.1

Points to Remember

- Preset risk factors are a guide for the investigator to confirm with the client whether or not each risk factor is applicable to the client’s circumstances.
- When risk factors are recorded under an investigation, Panorama will prompt the user to ask a client about certain “pre-set” risk factors that are determined by the Encounter Group and Disease(s) associated with the investigation. Additional risk factors may be added as applicable.

Panorama Quick Reference Card

- At any time, click the **Reset** button to clear any unsaved values entered on the screen. The **X** button will close the screen.
- If there is no investigation in context, the **Risk Factor is Pertinent to investigation in context** checkbox will not be displayed. .
- To display all pre-set risk factors on one page, change the records per page view, located at the bottom of the screen, to **All**.
- Pre-set risk factors cannot be removed from the list displayed. If a pre-set risk factor that was previously made effective is no longer applicable, an **Effective To** date can be used to indicate the risk factor is no longer relevant. The **Effective from** date field must be completed in order to save the **Effective To** date.
