

## Working with Lab Results – QRC IOM 101-4.5

## Panorama Quick Reference Card

### Points to Remember

- To work with test results, begin by viewing the test and results.
- If a user navigates to the Lab Summary screen with both a client and investigation in context and attempts to view/update the Lab Report, the system will present an error message and not allow navigation to the lab report until the investigation is removed from context.
- The simplest way to remove the investigation from context is to click Recent Work and click the **hyperlink** of the client being updated. This will remove the investigation from context.
- Tasks should be created **both** when a new lab result is entered and when subsequent results are received and entered.
- If microorganism results are updated in the lab module, the task should be used to inform the investigator to update the microorganism fields in the investigation
