Panorama Quick Reference Card

Create an Outcome – QRC IOM 102-11.1

Set client and investigation in context in Investigation Module → Click Outcomes on Left-Hand Navigation menu → Outcomes screen displays → Under Outcome History section, select the Outcome from the drop-down list and then click Add Outcome → The screen refreshes and the Outcome displays in the table ↓

End ← Click Save ← The added comment displays in the Comments table ← Enter comments in the Comments field, then click Add
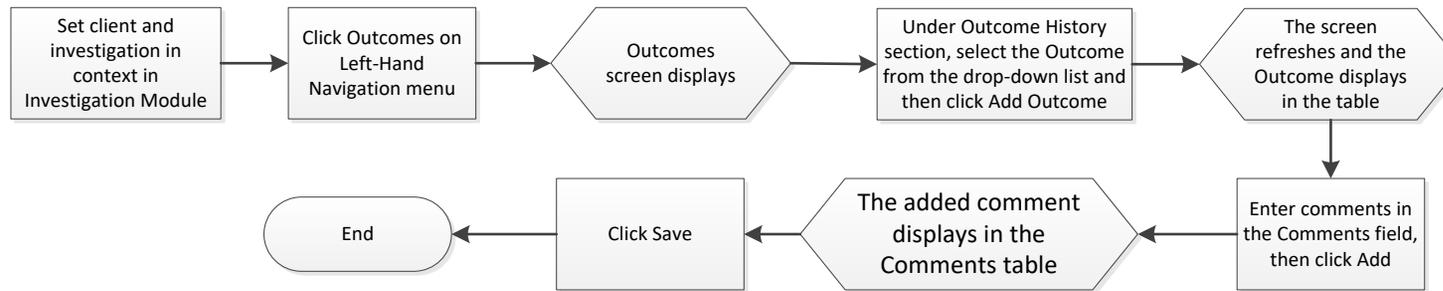

Points to Remember

- **Outcome is related to the Notifiable Disease that you are investigating.** Ex if a person is in hospital for hysterectomy and during pre-operative work up are found to have Hepatitis C their outcome would be **not hospitalized.** If they were in hospital for liver failure and found to have Hepatitis C, then outcome would be **hospitalized**.

- If the Client and Investigation in Context are linked to an Outbreak, the recorded outcome for that Client displays in the table on the Outcome Counts screen.

- If the Outcome is Other, enter the Outcome Details in the activated **Other Outcome** field.

- Do not complete the Relation to Communicable Disease Field.

- Value "Recovered" to be used for circumstances such as a patient with e-coli where stool samples come back clear.
