

TB Test Create, Update, Follow Ups Update and Delete – QRC IOM 103-4.3

Panorama Quick Reference Card

Points to Remember

- The TB Test Summary screen is used to collect and view test result information pertaining to Tuberculosis (TB) skin tests.
- A subject or investigation must be in context before accessing this screen.
- At any time, click the **Clear** button to clear all entry fields and set them back to their default values.
- When creating a TB skin test, checking **Historical** prevents the mandatory fields from being enforced.
- If an investigation is context, the system will display and select the **Pertinent to Investigation** check box.
- If a user has filled in the **Test Read Details**, then the system also creates a TB Skin Test Read encounter event. Once the TB skin test is created, the user can add documents to it.
- The **Date Test Read** must be at least two days after the **Date Test Give**.
- The **Exposure Date** and **Recent Illness Date** will be mandatory depending on the answer provided for **Other TB Case Contact** and **Recent Illness**.
- If deleting a follow up or TB test, clicking **Cancel** in response to the confirmation message will result in a cancelation of the deletion.
