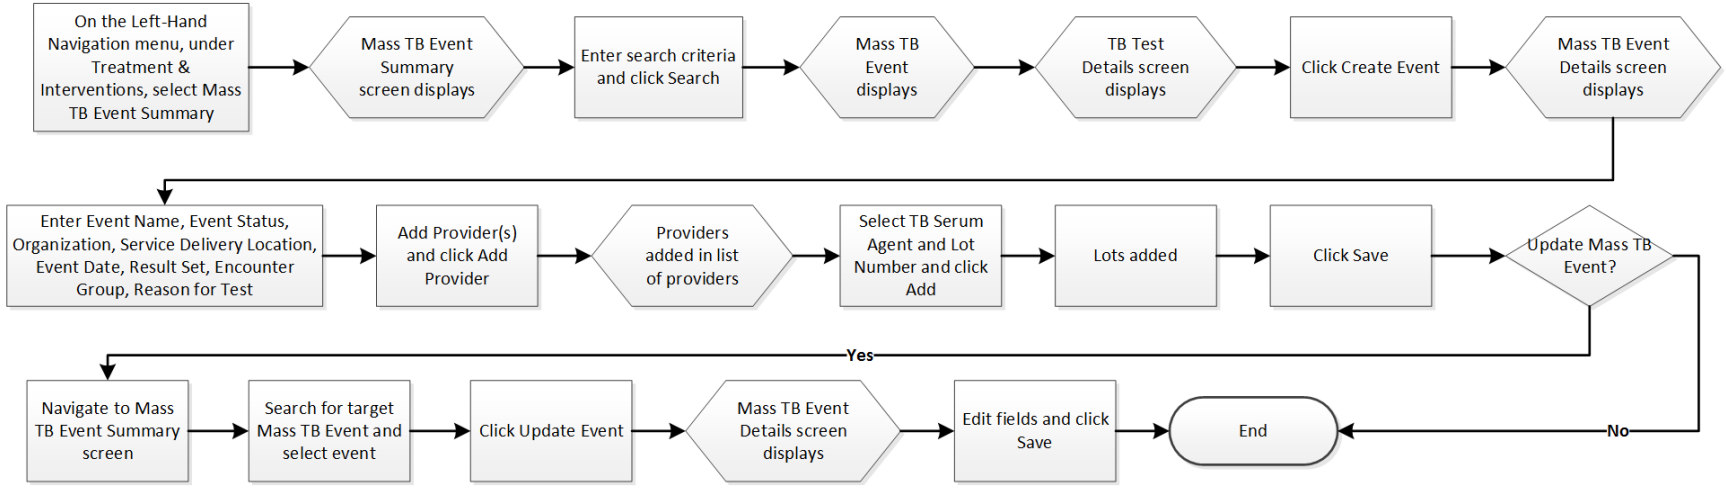
Mass TB Events Create/Update – QRC IOM 103-5.2



Points to Remember

- A cohort with at least one result set must be in context before a **Mass TB Event Details** screen can be accessed. Reference User Guide PNS IOM 102 Investigation Management Part 1 for instructions on how to create a cohort.
- Click the **Clear** button to clear any unsaved values on the **Mass TB Event Details** screen.
- When removing a provider, select the provider and click the **Remove Provider** button.
- To remove lots, select the lot and click the **Remove Lot** button. To clear a lot before it has been added, click the **Clear Lot** button.
- TB Mass Events are completed within the context of a cohort – not an investigation.
