

Record, View, Update, Delete, Discontinue TB or HIV Medications – QRC IOM 103-6.2

Panorama Quick Reference Card

Points to Remember

- The Medications Summary screen allows a user to record, update, delete, view, and discontinue medications for a client.
- Regarding the **Client Drug Resistances** section, drug resistances are entered via the lab screens and will appear in this section for information purposes.
- **Adverse Drug Reaction (ADR)** functionality will not be used in Nova Scotia.
- **Drug** is a type-ahead field. Once two or more letters have been entered, a list of drugs matching the entry will appear. Click the appropriate drug to enter it.
- **Protocol** and **Standard Tx** functions will not be used in Nova Scotia.
- Once a record is saved, only the Status, Status Date, and DOT indicator field can be updated. The medication cannot be deleted.
- In order to enter details into the Directly Observed Therapy screen, the Set DOT indicator must be set.
- Use medication status “prescribed” until the patient begins taking the medication.
- “Reason Drug not Stopped” to be documented in clinical notes.
- “Duplicate Record” to be used in Discontinue Drug Details when a medication has been entered in error, as the medication can’t be deleted once saved.
