

## Invalidating Transmission Event Entered In Error – QRC IOM 104-6

Assuming that the transmission event was associated to the wrong client, the process to correct the error includes 2 steps:

- Unlink all AEs attached to the incorrect Investigation
- Create new Investigation and TE with the correct client in context

### Points to Remember

- A Transmission Event (TE) cannot be deleted but can be invalidated. In the event a transmission event is entered in error, the acquisition events must be unlinked and the TE is marked as invalid.

## Panorama Quick Reference Card

- **Important:** When reconciling an incorrect investigation/TE, search for Known Contacts by INV ID. **DO NOT** search for Known Contacts by Client ID, as this may create a duplicate INV and duplicate AE.
